

MAR-MAC QuickDraw™ Reel

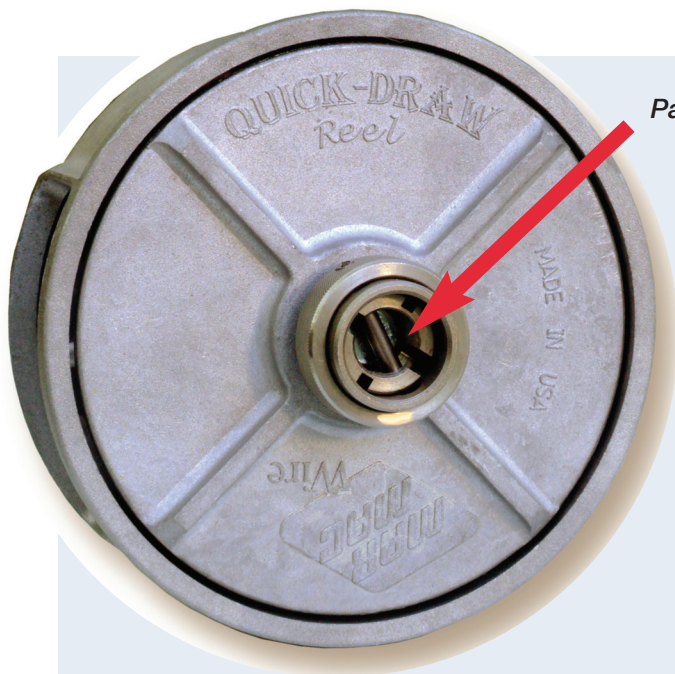

The Safer Tie Wire Reel

Reduce Dropped Object Hazards at the Jobsite

Traditional tie wire reels use a reverse thread mechanism to attach the face plate. This mechanism can fail unexpectedly during normal use. RodBusters and Ironworkers know the frustration when they lose a face plate and have stop work for a new reel and roll of wire.

When working at height, **a falling face plate is more than a inconvenience — it's a safety issue.** A ½-pound plate is traveling 43.5 feet per second at the bottom of a 30 foot drop. That's no longer a frustration — that's now a projectile.

The QuickDraw Reel's unique cam-lock closing mechanism solves this problem. This action secures the face of the reel without threads and will not dislodge during normal use when used correctly.

Patented cam-lock closing system.

Features

- Patented Cam-Lock Closing System
- Dual 2" wide belt loops in back for secure positioning on the waist
- Twin wire ports for right- or left-handed use
- Constructed of rust-free cast aluminum and stainless components
- Made by MAR-MAC in the USA 

Quick & simple reloads, tangle-free operation and durability you can trust!
