

ALL THREAD FIBERGLASS FORM TIES MODULAR FORMING

We are very pleased to introduce a whole new concept in fiberglass ties for modular concrete form work. Our new tie fits comfortably into the slot of the modular form securing the form and creating a strong connection. Our tie is much easier to install and use because we have ELIMINATED grips and wedges.

1,500 pound safe working load - single nut

3,000 pound safe working load - double nut

Guaranteed loads unlike traditional steel pencil rod that can slip with a set screw

NO patching

Non-Corrosive

Easiest Installation

Cut to fit in the field

Our new fiberglass form ties for modular forming insures a perfect forming job EVERY TIME. The ties are manufactured via CNC process to ensure tightest quality standards!

The precision milled flat ensures that you can slide our fiberglass tie through the slots in standard Steel Ply forming systems with ease after wedge bolts have already been installed allowing the panel system to be handled as a gang forming system if desired.
